

Ensure your property opens **on time,**  
**on budget,** with all your **technologies**  
working the way they should - *on day one.*

### Introducing Deep Blue **Enhanced Network Services**

Hotels and Resorts require a well-planned, well executed Wi-Fi network and IT infrastructure to support technology today and in the future. Deep Blue Communications is a leader in engineering, installing, and supporting enterprise grade hospitality networks.

From the earliest stages of project development, our team of senior network engineers, project managers, and business analysts will lower your risks and take away your headaches. Delivering peace of mind so you can focus on delivering the best guest experience.

## Our comprehensive suite of services includes:

### Certified Project Management

Certified project managers delivering the technology and networking components you need from start to finish. We'll work with your team on confirming all technology integrations and costs, scheduling cost-effective installations and finding the solutions that deliver the best ROI within your budget.

### Brand Standard Compliance

We'll help you understand and meet your brand standards, and consult with you on all technology services at the property, from security and PMS to integrated voice, data and HSIA.

### Network Design & Integration

We'll design a network that will support your needs now with scalable design for the future. We'll work with you and all your technology vendors, analyzing the benefit of a converged infrastructure utilizing best of breed products, including Ruckus Wireless, Cisco, HP, Juniper, Brocade and Palo Alto Networks.

### Cabling Infrastructure

We can do the cabling ourselves or work with your chosen vendor to ensure the right cable is run where needed, to support all of the technology at your property, now and in the future. We help lower the risk of costly last minute cabling changes by assessing all of your technology needs upfront and designing with a scalable infrastructure.

### Implementation & Support

Deep Blue network engineers and installation technicians bring it all together. We'll install the network components and onboard all 3rd party technology services with 24/7 network support. Our help desk, ISP management, remote monitoring and support includes all vendors on the network reducing costs and streamlining operations.

### Why Choose Deep Blue

Our experience engineering and supporting core Wi-Fi infrastructure allows us to best manage the network and onboarding any 3rd party vendors and devices. We are your partner in managing the continual technology changes that enhance your guest experience. We'll work with you and your development team to assess all of your needs using our MORE approach.

Let Deep Blue help you use technology to  
**Monetize. Optimize. Respond. Elevate.**
